Yale provides a number of computing facilities on campus. Macintosh and Windows computers and laser printers are available for general use by the Yale community at Connecticut Hall, Bass Library, Dunham Laboratory, and several other campus locations (http://its.yale.edu/services/computer-labs-and-printing). In addition, computer rooms are provided in each of the residential colleges. The Student Technology Collaborative (http://its.yale.edu/centers/student-technology-collaborative) supplies staffing for the computer clusters in Connecticut Hall, Bass Library, and Dunham Laboratory. In these locations, Student Techs provide support for the cluster machines and are available for general consultation.

The Computer Science and Engineering departments operate extensive computer facilities for use by their students and faculty, and several other departments have specialized research and teaching facilities. Instructors are invited to consult with these departments.
