MUSI 100a or b, Melody, Rhythm, and Notation in Global Context  Ian Quinn
Students in this course learn techniques for analyzing, representing, and reproducing basic musical structures of periodicity, pattern, and structure in the domains of pitch, time, and timbre. Conceptual skills include systems of nomenclature and classification derived from European, Arabic, and Indian pedagogical traditions and cover rhythms, meters, scales, modes, intervals, and chords. Students also gain fluency in staff notation, which originates in the European tradition but has colonized many other practices; we also spend time with other visualization techniques and notation systems for musical sound. Aural skills connect concepts and notations with embodied sound via practices like singing with European and Indian solfege and timekeeping with European conducting patterns and Indian clapping patterns. We also cover techniques of analytical listening and transcription, restricting ourselves to a small group of focused playlists representing different cultures of musicmaking, including global hip-hop, south Indian classical music, and vernacular music marketed separately to Black and White audiences in the early days of the American recording industry.

* MUSI 145a, Music in Japan  Liam Hynes-Tawa
Like Japanese culture in general, Japan's music has been stereotyped both as very old/traditional and very modern/Western, a dichotomy that fails to take into account the many rich layers of history that have combined to create the landscape we see today. This course walks through several different genres and periods in the history of Japanese music, allowing students to become more deeply familiar with types of music that they may have heard before, and to get to know new repertoires that may be more unfamiliar. In order to proceed from the more to the less known, the course moves in backward chronological order, beginning with recent music that most of us have heard somewhere, like popular anime and video game soundtracks. From there we move deeper back into the twentieth century, examining the postwar genres that gave rise to more familiar recent ones, and from there to the songs that accompanied Japan's turn to colonial empire in the late nineteenth and earlier twentieth centuries. Finally, we end by learning what we can about the music that predates sound recording and Western influences. Sophomore Seminar: Registration preference given to sophomores. Not normally open to first-year students.  WR, HU

* MUSI 172a, Music in Words: Controversy, Critique, Inverte  Brian Miller
This course examines the practice of writing about music by surveying a variety of instances (spanning roughly the past century) in which music has been the subject of controversy, involving questions of politics, aesthetics and/or identity. These cases span several musical styles and include debates over the artistic merit of pop, rock, and smooth jazz; the role of race in constructing histories of popular music; the emergence of experimental musical languages in avant-garde movements, and more. Perhaps ironically, a major theme in much writing on music is music’s resistance to language—the seemingly inherent difficulty involved in translating, explaining, or even just describing the sonic and embodied experience of music in words. But whatever difficulties are involved, writing about music is an important cultural form, in genres ranging from reviews and criticism to academic scholarship to cultural critique to fiction. In this writing seminar, students encounter exemplary works of writing about music in these and other genres, and also learn to produce some of
these forms along with critical evaluations and responses to debates and controversies encountered in the readings. Sophomore Seminar: Registration preference given to sophomores. Not normally open to first-year students. WR, HU

* MUSI 189a / HUMS 189a, **Music & Jane Austen** Jessica Peritz

This course takes Jane Austen as a guide to the world of early nineteenth-century music culture in Britain, exploring through her novels the relationships between music, gender, and class in the decades around 1800. We approach this period of music history by delving into how “regular people”—especially women—consumed, curated, and created music in their everyday lives. Austen, an accomplished musician herself, wove music into her novels in ways that reveal much about contemporary practices of (and prejudices against) music-making. We focus on three of Austen’s novels (Pride & Prejudice, Sense & Sensibility, Emma) and excerpts from her music manuscript collections, alongside recent scholarship and modern film adaptations, which taken together raise a series of interdisciplinary questions. By learning about Austen’s musical milieu, we open up the musical lives of Regency-era women and the ‘middling sort,’ while becoming more attuned to the social critiques embedded in Austen’s representations of music, ultimately enriching our engagement with the novels themselves. The ability to read musical notation is not required, but will be helpful. HU

The history of music notation is intimately linked with the histories of musical composition and performance. This course combines a study of musical paleography (i.e. how music is written down) with consideration of the historical and intellectual currents that shaped, and were shaped by, systems of music writing. Among the systems surveyed are the neumes used to preserve early plainchant, the increasingly specific rhythmic notations that recorded Western polyphony from the thirteenth century onward, and the notational puzzles and games of the fourteenth and fifteenth centuries. Final projects may focus on medieval or later music notations. Prerequisite: ability to read modern music notation comfortably.  HU
* MUSI 460a, Music and the Metropolis, 1900-1950  Angharad Davis
In the first half of the twentieth century, the great metropolises of Europe and North America bustled as never before. Motor klaxons hooted in the streets; elevated trains rattled overhead while subways rumbled below; parlour pianos tinkled, and radios blared. This course introduces students to ways in which not only musicians, but also politicians, sociologists, artists, and citizens of the early twentieth century, perceived and responded to the modern urban environment as a sonic phenomenon. Topics for study include the theorising of modern experience by sociologists and philosophers such as Georg Simmel and Siegfried Kracauer; the thematising of city life and the wonders and dangers of technology in popular songs and films; the intersection of music and noise in the works of composers such as Charles Ives, Leo Ornstein, and George Antheil; and the paradox that led to jazz being celebrated both as an emblem of urban hyper-modernity and as an icon of anti-modern ‘Primitivism.’ Ability to read music required.
