Alexis de Tocqueville and John Stuart Mill were two of the most prominent liberal theorists and statesmen of the 19th century. They
recognized that the modern era was to be democratic, and both sought a “new political science” to understand and guide “a world
altogether new.” This course will compare their political philosophies, asking how each understood the relations between individualism
and community, democracy and liberty, and citizenship and human flourishing.  HU

PLSC 340a / S&DS 315a, Measuring Impact and Opinion Change  Joshua Kalla
This course introduces students to measuring impact. Political campaigns, marketers, governments, and non-profit organizations
regularly try to produce opinion change through TV, radio, online ads, mail, and door-to-door canvassing. Are these efforts successful at
producing opinion change? In this course, we learn how to use experiments and natural experiments to measure the impact of opinion
change efforts, and how to be appropriately skeptical of findings that claim to measure impact. This course also teaches data analysis skills
in R. Prerequisite: A prior statistics course at Yale (e.g., PLSC 425, S&DS 242) and programming experience in R. Enrollment limited; 
requires permission of the instructor.  QR

PLSC 349a, Visualization of Political and Social Data  Alexander Coppock
This course is an introduction to data visualization with a focus on political and social data. Our main textbook is *The Visual Display of
Quantitative Information* by Edward Tufte, a foundational book that explores the history of data visualization and offers a perspective
on how graphs should be constructed. We also learn from other visualization pioneers not included in Tufte’s review such as W.E.B.
Du Bois and Florence Nightingale. Our secondary textbook is the ggplot2 book by Hadley Wickham, an indispensable resource for
constructing statistical graphs in the programming language R. The main goal of the course is to help students to communicate both
‘what we know and why we think we know it’ through excellent data visualization. Prerequisite: Introductory course in statistics and
probability. Background familiarity with learning from random samples and the construction of confidence intervals is useful. Students
do not need to know how to program in R as it will be covered extensively.  QR, SO

PLSC 351b / CPSC 123b / S&DS 123b / S&DS 523b, YData: An Introduction to Data Science  John Lafferty and Elena Khusainova
Computational, programming, and statistical skills are no longer optional in our increasingly data-driven world; these skills are essential
for opening doors to manifold research and career opportunities. This course aims to dramatically enhance knowledge and capabilities
in fundamental ideas and skills in data science, especially computational and programming skills along with inferential thinking. YData is an
introduction to Data Science that emphasizes the development of these skills while providing opportunities for hands-on experience and
practice. YData is accessible to students with little or no background in computing, programming, or statistics, but is also engaging for more technically oriented students through extensive use of examples and hands-on data analysis. Python 3, a popular and widely used computing language, is the language used in this course. The computing materials will be hosted on a special purpose web server.

* PLSC 352a / PLSC 532a, Mixed Methods Research Elizabeth Nugent

This course is intended as an overview for creating and critiquing sophisticated research designs using both quantitative and qualitative methodologies and data. The course begins with fundamental definitions and assumptions underpinning mixed methods research, and then moves on to analyzing the strengths and weaknesses of specific combinations of quantitative tests, case studies, and narrative and interpretive work. Next, the course discusses the research design choices of two award-winning books using mixed methods research, and then evaluates the qualitative and quantitative data in isolation and in combination. The final assignment builds on the course material to produce a mixed method research design proposal. This course is ideal for upper level undergraduates who are interested in learning more about designing and carrying out mixed methods research in seminar papers, senior essays, and independent research projects.

How does gender inequality manifest in different social, economic, and political spheres e.g. the household, the labor market, the electorate, the government? What are the cultural and structural drivers of gender inequality? How effective are different approaches to tackling gender inequality in South Asia? PLSC 396b / MMES 364b, Politics of the Contemporary Middle East  Elizabeth Nugent
This course is an overview of contemporary politics of the Middle East, and is organized thematically and (more or less) chronologically. We examine prominent explanations for the democratic deficit in the Middle East, and challenge the notion that the region is completely devoid of competitive and meaningful politics. We also explore the ways in which a variety of factors—including foreign intervention, persistent authoritarianism, oil, and Islam, among others—has affected domestic politics. We consider different aspects of domestic politics, including redistribution, gender politics, and public opinion. We end the course by building on what we learned to make sense of the 2010-2011 'Arab Spring' uprisings, in an effort to understand whether these developments mark change or continuity.  so

* PLSC 408b, Human Rights, Law and Politics in Contemporary Russia  Staff
The seminar is designed to give a broad understanding of the lines of theorizing and types of research that animate the study of human rights issues and human rights mobilizations in post-soviet Russia. Acquainting students with academic research in history, sociology, anthropology and political science on the matter, the seminar seeks to analyze these topics going beyond media portrayals of Russian society and binary oppositions that often structure narratives of Post-soviet social and political reality (state vs. civil society, rule of law vs. kangaroo justice, democracy vs. authoritarianism, repression vs. resistance). This course analyzes how “human rights” have been constructed—as a cause, as a discourse, as a legal and institutional framework—since the Soviet dissident movement, then in the 1990s and 2000s, until today, when “human rights” have become a dominant frame on a number of very heterogenous issues for media and activists denouncing the political regime in Putin’s Russia. It pays particular attention to the sociology of actors, as well as to historical, political and social conditions of emergence and development of human rights mobilizations. The course also focuses on various empirical case studies on highly mediated human rights issues: political prisoners, protest-related trials, women’s rights, LGBTQ rights, prison and penitentiary institutions. These case studies provide students with a broader empirical knowledge on contemporary Russian society, and serve as a magnifying glass, as they highlight complex dynamics of Russian politics and law in the last thirty years.  so

* PLSC 410a, Political Protests  Maria Jose Hierro
The 2010s was the “decade of protest,” and 2019 capped this decade with an upsurge of protests all over the world. In 2020, amidst the Covid-19 pandemic, the US is witnessing the broadest protests in its history. What are the roots of these protests? Under what conditions does protest start? Why do people decide to join a protest? Under what conditions do protests succeed? Can repression kill protest movements? Focusing on recent protest movements across the world, this seminar addresses these, and other questions related to the study of political protest.  so

* PLSC 450b / GLBL 341b, The Geopolitics of Democracy  Staff
The threats to liberal democracy are being widely debated, from the US and Europe to developing nations. In order for democracy to continue to thrive as the cornerstone of Western governance, it must adapt and be relevant to citizens of the 21st century. This course examines our appreciation of what constitutes democracy today and how to apply those understandings to the challenges of the 21st century. Our discussions look at the characteristics of democratic leaders and debate whether America, the bulwark of liberal democracy in the 20th century, is still an exporter of democracy and how that matters in today’s world. We then look at how to protect and adapt democratic institutions such as free elections, civil society, dissent, and the free press in the face of a rising wave of populism and nationalism. The course examines how refugee crises from conflict regions and immigration impact democracies and debate the accelerating paradigm shifts of income inequality and technology on democratic institutions. We conclude the course with a discussion of the forms of democratic governance that are meaningful in the 21st century and the practicalities of designing or reforming democratic institutions to confront current challenges.  so

Students receive an introduction to statistical programming in R, supervised and unsupervised machine learning, and causal inference.  QR, so

* PLSC 455a, Big Data, AI, and Political Science: Applications to Russian Politics  Anton Sobolev
This cross-disciplinary course focuses on two broad questions. First: how do politicians use new technologies to influence politics? Second: how do scholars use new technologies to study politics? It uses Russia as a laboratory to explore these questions. The course consists of four parts. It starts with a review of contemporary Russia and pays attention to the quantitative studies of its economy and politics. Next, the course provides a non-technical introduction to Big Data and AI algorithms. Finally, it outlines the applications of the new technologies to the study of Russian politics. Prerequisites: A prior Yale statistics course (e.g., PLSC 425, S&D 242); programming experience in R. A course on research design in the social sciences is helpful, but not required.

* PLSC 458a / AFST 304a / MMES 304a, Modern North Africa in Flux

Readings and approach to politics are cross-disciplinary, integrating political science, anthropological, historical, religious, as well as gender/race studies
PLSC 463b, Nationalism in the World  Maria Jose Hierro
Nationalism is the most powerful political force in the world. It can explain why countries come together and why countries come apart. It can also explain why people praise and trust those who belong to the nation and despise and distrust those who do not. This course introduces students to the study of nationalist thought and practice. The course first examines the concept of nationalism and other adjacent concepts, and reviews different theoretical approaches to the study of nationalism. From here, the course moves to examine nationalist practices: the origin of the nation, the crafting of a national identity, the practice of inclusion and exclusion, the relationship between nationalism and democracy and nationalism and conflict, nationalism in the postcolonial world and nationalism in the world today. The course examines nationalist thought and practice in different geographic areas and relies on both theoretical and empirical literature from several disciplines (history, economy, sociology, psychology and political science) to understand the power of nationalism in the world today.
