LINGUISTICS

Director of undergraduate studies: Raffaella Zanuttini, 209 DOW, 432-2452, raffaella.zanuttini@yale.edu; ling.yale.edu

Linguistics is the scientific study of language. The major in Linguistics offers a program of study leading toward an understanding of phonological, grammatical, and semantic structure and of various approaches to descriptive, experimental, and historical linguistics. Majors may concentrate on theoretical, experimental, or computational linguistics, on various aspects of comparative grammar, or on a particular family of languages. Interested students should consult the director of undergraduate studies.

COURSES FOR NONMAJORS AND MAJORS

Students with no previous background in linguistics are encouraged to approach the field by taking a 100-level course.

REQUIREMENTS OF THE MAJOR

The major requires twelve term courses in linguistics and related areas, distributed as follows:

1. Breadth requirement (four courses). All majors must take a course in each of the core areas of phonology (LING 232) and syntax (LING 253). In addition, at least one course must be taken in any two of the six remaining core areas of linguistics: phonetics, morphology, semantics/pragmatics, computational linguistics, language and mind/brain, and historical linguistics.

2. Depth requirement (two courses). In one of the eight core areas of linguistics, students must take two additional courses beyond the introductory level.

3. Electives (four courses). Four additional courses relating to linguistics are required, at least one of which must be at the 200 level or above. Electives may be chosen from courses offered by the Linguistics department or, with approval of the director of undergraduate studies, from related courses in programs such as Anthropology, Classics, Cognitive Science, Computer Science, English, Philosophy, Psychology, or foreign languages.

4. Research requirement (one course). LING 490, Research Methods in Linguistics, is required and is usually taken in the fall term of the senior year.

SENIOR REQUIREMENT

Senior requirement (one course). Students attend a research colloquium and write a senior essay in LING 491 during the spring term of the senior year.

ADVISING

Combined B.A./M.A. degree program Exceptionally able and well-prepared students may complete a course of study leading to the simultaneous award of the B.A. and M.A. degrees after eight terms of enrollment. See Simultaneous Award of the Bachelor’s and Master’s Degrees under Special Arrangements in the Academic Regulations. Interested students should consult the director of undergraduate studies prior to the sixth term of enrollment for specific requirements in Linguistics.

REQUIREMENTS OF THE MAJOR

Prerequisites None

Number of courses 12 term courses (incl senior req)

Specific courses required LING 232, 253, 490

Distribution of courses 1 course each in 2 addtl core areas, as specified; 2 addtl courses beyond intro level in 1 core area; 4 electives, at least 1 at the 200 level or above

Senior requirement LING 491

FACULTY OF THE DEPARTMENT OF LINGUISTICS

Professors Claire Bowern, Robert Frank (Chair), Laurence Horn (Emeritus), †Frank Keil, †Joshua Knobe, †Jason Stanley, †Zoltán Szabó, Petronella Van Deusen-Scholl (Adjunct), Raffaella Zanuttini

Associate Professors Maria Piñango, Kenneth Pugh (Adjunct)

Assistant Professors Jason Shaw, Natalie Weber, Jim Wood

Lector Jessica Tanner

Lecturer Hadas Kotek

†A joint appointment with primary affiliation in another department.

Introductory Courses

Courses in this group do not require previous study of linguistics.
The processing of language in real-time. Language as a system of mental rules, governing the sound, form, and meaning system. The (impossible) distinction between language and dialect. The scientific study of standard and non-standard varieties. Social attitudes toward prestige and other varieties; linguistic prejudice. Focus on morpho-syntactic variation in North-American English: alternative passives ("The car needs washed"), personal datives ("I need me a new printer"), negative inversion ("Don’t nobody want to ride the bus"), "drama SO" ("I am SO not going to study tonight").

Some courses in this group have prerequisites; others do not, and may be taken as a student’s first course in linguistics.

* LING 200b, Experimentation in Linguistics  Maria Piñango and Jason Shaw
Principles and techniques of experimental design and research in linguistics. Linguistic theory as the basis for framing experimental questions. The development of theoretically informed hypotheses, notions of control and confounds, human subject research, statistical analysis, data reporting, and dissemination. Prerequisite: LING 110, 117, 220, CGSC 110, or PSYC 110, or permission of instructor.

* LING 211b, Grammatical Diversity in U.S. English  Raffaella Zanuttini
Language as a system of mental rules, governing the sound, form, and meaning system. The (impossible) distinction between language and dialect. The scientific study of standard and non-standard varieties. Social attitudes toward prestige and other varieties; linguistic prejudice. Focus on morpho-syntactic variation in North-American English: alternative passives ("The car needs washed"), personal datives ("I need a new printer"), negative inversion ("Don’t nobody want to ride the bus"), "drama SO" ("I am SO not going to study tonight").

LING 217a / EDST 237a / PSYC 317a, Language and Mind  Maria Piñango
The structure of linguistic knowledge and how it is used during communication. The principles that guide the acquisition of this system by children learning their first language and adults learning a second language. The processing of language in real-time. Language breakdown as a result of brain damage.
LING 219a / ANTH 380a, The Evolution of Language and Culture  Claire Bowern
Introduction to cultural and linguistic evolution. How diversity evolves; how innovations proceed through a community; who within a
community drives change; how changes can be “undone” to reconstruct the past. Methods originally developed for studying evolutionary
biology are applied to language and culture. None  WR, SO

LING 220b / PSYC 318b, General Phonetics  Jason Shaw
Investigation of possible ways to describe the speech sounds of human languages. Acoustics and physiology of speech; computer
synthesis of speech; practical exercises in producing and transcribing sounds.  SO

LING 224a, Mathematics of Language  Robert Frank
Study of formal systems that play an important role in the scientific study of language. Exploration of a range of mathematical structures
and techniques; demonstrations of their application in theories of grammatical competence and performance including set theory, graphs
and discrete structures, algebras, formal language, and automata theory. Evaluation of strengths and weaknesses of existing formal
theories of linguistic knowledge.  QR, SO

LING 227a / PSYC 327a, Language and Computation I  Robert Frank
Design and analysis of computational models of language. Topics include finite state tools, computational morphology and phonology,
grammar and parsing, lexical semantics, and the use of linguistic models in applied problems. Prerequisite: prior programming
experience or permission of instructor.  QR, SO

LING 231b / PSYC 331b, Neurolinguistics  Maria Piñango
The study of language as a cognitive neuroscience. The interaction between linguistic theory and neurological evidence from brain
damage, degenerative diseases (e.g., Alzheimer’s disease), mental illness (e.g., schizophrenia), neuroimaging, and neurophysiology. The
connection of language as a neurocognitive system to other systems such as memory and music.  SO

* LING 232a, Introduction to Phonological Analysis  Natalie Weber
The structure of sound systems in particular languages. Phonemic and morphophonemic analysis, distinctive-feature theory, formulation
of rules, and problems of rule interpretation. Emphasis on problem solving. Prerequisite: LING 220, or a grade of B or above in LING
110.  SO

LING 233b, The Literate Brain and Mind  Kenneth Pugh
The development of fluent reading and writing skills in children is essential for achieving success in the modern world, yet significant
numbers of people from all languages and cultures fail to obtain adequate literacy outcomes. This course examines: 1) the genetic
neurobiological and cognitive foundations of reading and writing, 2) how learning to read both depends upon and changes oral language
systems in the brain, 3) how insights from cognitive neuroscience inform our understanding of teaching and remediation of language and
literacy disorders, and 4) how all of this is both similar and dissimilar across contrastive written languages and diverse cultures. Students
acquire familiarity with multiple brain imaging tools and what we need to do to deliver on the promise of neuroscience in education.
LING 110 or CGSC 110 is recommended, but not required.  SO

* LING 235b, Phonological Theory  Natalie Weber
Topics in the architecture of a theory of sound structure. Motivations for replacing a system of ordered rules with a system of ranked
constraints. Optimality theory: universals, violability, constraint types and their interactions. Interaction of phonology and morphology,
as well as the relationship of phonological theory to language acquisition and learnability. Opacity, lexical phonology, and serial versions
of optimality theory. Prerequisite: LING 232 or permission of instructor.  SO RP

* LING 241b, Field Methods  Claire Bowern
Principles of phonetics, phonology, morphology, syntax, and semantics applied to the collection and interpretation of novel linguistic
data. Data are collected and analyzed by the class as a group, working directly with a speaker of a relatively undocumented language.
Open to majors and graduate students in Linguistics, and to others with permission of instructor. Students should have taken LING 232
or LING 220 and one other linguistics class.  SO

LING 253a, Syntax I  Raffaella Zanuttini
If you knew all the words of a language, would you be able to speak that language? No, because you’d still need to know how to put
the words together to form all and only the grammatical sentences of that language. This course focuses on the principles of our mental
grammar that determine how words are put together to form sentences. Some of these principles are shared by all languages, some
differ from language to language. The interplay of the principles that are shared and those that are distinct allows us to understand how
languages can be very similar and yet also very different at the same time. This course is mainly an introduction to syntactic theory: it
introduces the questions that the field asks, the methodology it employs, some of the main generalizations that have been drawn and
results that have been achieved. Secondarily, this course is also an introduction to scientific theorizing: what it means to construct a
scientific theory, how to test it, and how to choose among competing theories.  SO

LING 254b, Syntax II  Hadas Kotel
Recent developments in the principles and parameters approach to syntactic theory. In-depth exploration of theoretical and empirical
issues in long-distance dependencies (island effects, dependency types, movement vs. binding), the character of syntactic structure
( constituency, thematic mapping, functional categories), and the architecture of grammatical derivations (logical form, operations for
structure building, anaphora). Prerequisite: LING 253.  SO
LING 263a, Semantics I  Hadas Kotek
Introduction to truth-conditional compositional semantics. Set theory, first- and higher-order logic, and the lambda calculus as they relate to the study of natural language meaning. Some attention to analyzing the meanings of tense/aspect markers, adverbs, and modals. Q8, SO

LING 271a / PHIL 271a, Philosophy of Language  Jason Stanley
An introduction to contemporary philosophy of language, organized around four broad topics: meaning, reference, context, and communication. Introduction to the use of logical notation. HU

Advanced Courses and Seminars

* LING 372a, Meaning, Concepts, and Words  Maria Piñango
A cognitive approach to the structure of meaning from the perspective of the language system. The brain’s finite collection of stored concepts, which are combined and recombined via predetermined principles. The system of associating combinations of concepts with combinations of words and sentences to produce an unlimited number of novel thoughts. Prerequisite: at least one course in linguistics, psychology, or cognitive science.  SO

* LING 378a, The Syntax of Speech Participants  Raffaella Zanuttini
This course focuses on grammatical elements that make salient the role of speaker and addressee: markers of politeness; pronouns that express the familiar and polite distinction; vocatives; as well as "presentatives," including sentences whose function is to bring something to the attention of the addressee. On the empirical side, we discover, describe, and compare elements that convey information about the addressee, the speaker, or the speaker-addressee relation. On the theoretical side, we ask which aspects of the information that they convey should be encoded in the syntax, if any, and how it should be encoded. Prerequisite: LING 253, or permission of instructor. SO

Research Courses

* LING 490a / PSYC 372a, Research Methods in Linguistics  Hadas Kotek
Development of skills in linguistics research, writing, and presentation. Choosing a research area, identifying good research questions, developing hypotheses, and presenting ideas clearly and effectively, both orally and in writing; methodological issues; the balance between building on existing literature and making a novel contribution. Prepares for the writing of the senior essay.

* LING 491b, The Senior Essay  Raffaella Zanuttini
Research and writing of the senior essay under the guidance of a faculty adviser. Students present research related to their essays in a weekly colloquium. Prerequisite: LING 490.

Related Courses

* ANTH 306b, Language and Culture  Paul Kockelman
The relations between language, culture, and cognition. What meaning is and why it matters. Readings in recent and classic works by anthropologists, linguists, psychologists, and philosophers. SO

* ANTH 332a, Endangered Languages in Social Context  J. Joseph Errington
An introduction to language endangerment as a global phenomenon. Topics include politics of bilingualism and language shift, politics of linguistic identity and national communities, and language in media. SO

* ANTH 333b, Bilingualism in Social Context  J. Joseph Errington
The linguistic phenomenon of bilingualism presented through broad issues in social description inseparably linked to it: growth and change in bilingual communities; bilingual usage, social identity, and allegiance; and interactional significances of bilingual speech repertoire use. SO

* ANTH 413a, Language, Culture, and Ideology  J. Joseph Errington
Review of influential anthropological theories of culture, with reference to theories of language that inspired or informed them. American and European structuralism; cognitivist and interpretivist approaches to cultural description; the work of Bakhtin, Bourdieu, and various critical theorists. So RP

* CHLD 128b / EDST 128b / PSYC 128b, Language, Literacy, and Play  Nancy Close and Carla Horwitz
The complicated role of play in the development of language and literacy skills among preschool-aged children. Topics include social-emotional, cross-cultural, cognitive, and communicative aspects of play. WR, SO RP

CPSC 470b, Artificial Intelligence  Brian Scassellati
Introduction to artificial intelligence research, focusing on reasoning and perception. Topics include knowledge representation, predicate calculus, temporal reasoning, vision, robotics, planning, and learning. After CPSC 201 and 202. Q8

LATN 110a, Beginning Latin: The Elements of Latin Grammar  Staff
Introduction to Latin. Emphasis on morphology and syntax within a structured program of readings and exercises. Prepares for LATN 120. No prior knowledge of Latin assumed. Preregistration, which is required, takes place at the Academic Fair. See the Calendar for the Opening Days or the departmental Web site for details about preregistration. L1 RP 1½ Course cr
CPSC 477b, Natural Language Processing  Dragomir Radev
Linguistic, mathematical, and computational fundamentals of natural language processing (NLP). Topics include part of speech tagging, Hidden Markov models, syntax and parsing, lexical semantics, compositional semantics, machine translation, text classification, discourse, and dialogue processing. Additional topics such as sentiment analysis, text generation, and deep learning for NLP. Prerequisites: CPSC 202 and CPSC 223, or permission of instructor.  QR

* LATN 390b, Latin Syntax and Stylistics  Joseph Solodow
A systematic review of syntax and an introduction to Latin style. Selections from Latin prose authors are read and analyzed, and students compose short pieces of Latin prose. For students with some experience reading Latin literature who desire a better foundation in forms, syntax, idiom, and style.  L5, HU

PHIL 115a, First-Order Logic  Elizabeth Miller
An introduction to formal logic. Study of the formal deductive systems and semantics for both propositional and predicate logic. Some discussion of metatheory.  QR

PHIL 267a, Mathematical Logic  Sun-Joo Shin
An introduction to the metatheory of first-order logic, up to and including the completeness theorem for the first-order calculus. Introduction to the basic concepts of set theory. Prerequisite: PHIL 115 or permission of instructor.  QR

* PHIL 427b, Computability and Logic  Sun-Joo Shin
A technical exposition of Gödel’s first and second incompleteness theorems and of some of their consequences in proof theory and model theory, such as Löb’s theorem, Tarski’s undefinability of truth, provability logic, and nonstandard models of arithmetic. Prerequisite: PHIL 267 or permission of instructor.  QR, HU

* SLAV 202a, Church Slavonic  Harvey Goldblatt
A study of the long history of Church Slavonic, with special attention given to “New” or “Synodal” Church Slavonic, the language used in the “Elizabeth” or “Synodal” Bible (first published in 1751), which remains even today the authorized version of the Russian Orthodox Church. Special emphasis on the reading of representative New Testament excerpts from this “Synodal Bible,” comparing them to equivalent textual portions written in both earlier forms of Russian Church Slavonic and Modern Russian. Conducted in English. Prerequisite: Knowledge of Modern Russian.
