MOLECULAR BIOPHYSICS AND BIOCHEMISTRY

Director of undergraduate studies: Karla Neugebauer, CE 28A SHM, 785-3322, MBBUndergrad@yale.edu; (MBBUndergrad@yale.edu)mb&b.yale.edu

The programs offered by the Department of Molecular Biophysics and Biochemistry are planned for students interested in the molecular and chemical aspects of biological processes and are well suited to students hoping to attend medical or graduate school. The programs offer an intensive introduction to laboratory techniques in biochemistry and biophysics. Students in this program usually carry out research projects in faculty laboratories during their junior and senior years. The B.A. major provides the intellectual discipline of biochemistry and biophysics for students who also wish to have sufficient time to pursue in-depth studies outside the major or who are interested in molecular biology as a liberal education; they too may engage in research during their junior and senior years.

The major for the Class of 2018

With DUS approval, the following changes to the requirement of the major may be fulfilled by students who declared their major under previous requirements.

The major for the Class of 2019 and subsequent classes

For both degree programs, specific requirements are listed below.

PREREQUISITES

The basic science courses required of all majors include four half-term units of introductory biology (BIOL 101, 102, 103, 104); two general chemistry courses with laboratory (CHEM 161, 165, or CHEM 163, 167 [previously CHEM 112, 113, or CHEM 114, 115, or CHEM 118]); and CHEM 134L, 136L, 136L [previously CHEM 116L, 117L, or CHEM 119L]; a year course in organic chemistry with laboratory, (CHEM 174, 175 [previously CHEM 124, 125], or CHEM 220, 221 and CHEM 222L, 223L or CHEM 226L); one term of physical chemistry (CHEM 328); two terms of calculus (MATH 112 and 116); and one year of physics (PHYS 170, 171, or PHYS 180, 181, or PHYS 200, 201).

Some of the prerequisites in biology, chemistry, mathematics, and physics may be satisfied by scores on Advanced Placement tests or placement examinations sufficient to earn acceleration credits in the particular subjects, even if the student does not choose to accelerate.

REQUIREMENTS OF THE MAJOR

B.S. degree program

Nine courses are required beyond the prerequisites: MB&B 251L, 300, 301, 302, and 490; two additional upper-level MB&B electives, one of which must be a non-laboratory course; one quantitative reasoning elective (e.g., MATH 120 or above, S&DS 105 or 230 or above, CPSC 201 or above, or ENAS 130 or above); and one elective in the natural sciences at a level higher than required in the prerequisites. Students choose the elective courses in consultation with a faculty adviser (see below). Only two course credits of MB&B 470, 471, and 478, 479 may count toward these electives. Students may substitute CHEM 333 for MB&B 302. The quantitative reasoning requirement may not be fulfilled by Advanced Placement test scores.

B.A. degree program

Seven courses are required beyond the prerequisites: MB&B 251L, 300, 301, 302, and 490; one additional upper-level MB&B elective; and one quantitative reasoning elective (e.g., MATH 120 or above, S&DS 105 or 230 or above, CPSC 201 or above, or ENAS 130 or above). Students choose the elective courses in consultation with a faculty adviser (see below). Students may substitute CHEM 333 for MB&B 302. The quantitative reasoning requirement may not be fulfilled by Advanced Placement test scores.

Credit/D/Fail

Courses taken Credit/D/Fail may not be counted toward the requirements of the major.

SENIOR REQUIREMENT

The senior requirement for both the B.S. and the B.A. is fulfilled by successful completion of MB&B 490, The Senior Project. Students enrolled in this course prepare a written report and make an oral presentation of a literature project. Students meet with faculty members in charge of the colloquium during the first two weeks of the spring term to agree on a topic and an approach. It is appropriate for students who took research for credit earlier in their training to write on their research topic. It is inappropriate for students to submit a revised version of a past research report or to resubmit a literature paper prepared for another course. The literature project for the senior requirement should be original work approved by the faculty member overseeing the senior colloquium.

The written report is expected to be 15–25 pages in length (double-spaced, twelve-point font, exclusive of figures). A first draft of the paper is due two weeks prior to the date of the oral presentation. Faculty in charge of the program will review the draft and return it to the student with suggestions. A final draft of the paper is due the first day of the reading period in the student’s final term.

Students make a fifteen-minute oral presentation during the last three weeks of their final term in a general scientific forum open to the public. Other students in the series are expected to attend all presentations.

ADVISING

Recommended courses

All B.S. majors are encouraged to include MB&B 470 or 471 among their MB&B electives. Declared MB&B majors may take up to two credits of these independent research courses for a letter grade. The prerequisites in either general or organic chemistry should be taken in the freshman year.

Students with a strong interest in biophysics, including those planning to attend graduate school, are strongly encouraged to take courses beyond the basic requirements of the major. Such students are advised to take mathematics through differential equations
ENAS 194, MATH 246, or PHYS 301) and a full year of physical chemistry (CHEM 328 or 332, and 333). In place of one term of biophysics (MB&B 302) they may elect a full year of upper-level biophysics (MB&B 420 and graduate courses in optical spectroscopy and macromolecular interactions). Such revisions to the basic curriculum must be made in consultation with the faculty adviser.

Graduate work Graduate courses in molecular biophysics and biochemistry, biology, and the biomedical sciences that may be of interest to undergraduates are listed in the bulletin of the Graduate School, and many are posted on the Biological and Biomedical Sciences Website. Additional information is available from the directors of undergraduate and graduate studies. Undergraduates with an appropriate background may enroll with the permission of the director of graduate studies and the instructor.

Typical programs Programs with the minimal number of science courses required of B.A. and B.S. majors are shown below. Students whose scores on the Advanced Placement tests make them eligible for advanced courses are urged to replace the elementary science courses with more advanced ones in their first year, and to complete the required biochemistry and physics courses by the end of their sophomore and junior years, respectively. Students are permitted to take the biochemistry sequence (MB&B 300, 301) after one term of organic chemistry (CHEM 220).

Combined B.S./M.S. degree program Exceptionally able and well-prepared students may complete a course of study leading to the simultaneous award of the B.S. and M.S. degrees after eight terms of enrollment. See "Simultaneous Award of the Bachelor’s and Master’s Degrees" under Special Arrangements in the Academic Regulations. Interested students should consult the director of undergraduate studies prior to the sixth term of enrollment for specific requirements in Molecular Biophysics and Biochemistry.

MB&B faculty advisory system All undergraduates are assigned two MB&B advisers specifically appointed for their year, with the idea that undergraduates will have the opportunity to know at least one MB&B faculty member in addition to the DUS and maintain an advising relationship throughout their studies. The advisers are apprised of curriculum-related details for each year and are authorized to sign schedules. Members acting as faculty advisers are:

Class of 2018:
- K. Neugebauer, C 123 SHM (785-3322)
- J. Berro, 309C JWG (737-3285, 432-5437)

Class of 2019:
- J. Howard, 334A BASS (432-7245)
- C. Schlieker, 236A BASS (432-5035)

Class of 2020:
- E. De La Cruz, 336A BASS (432-5424)
- P. Sung, C-130A SHM (785-4553)

Class of 2021:
- W. Gilbert, C-127 SHM (785-4857)
- M. Solomon, 218 BASS (436-9053)

REQUIREMENTS OF THE MAJOR

Prerequisites B.S. and B.A. – BIOL 101, 102, 103, and 104; CHEM 161, 165, or CHEM 163, 167 (or CHEM 112, 113, or CHEM 114, 115, or CHEM 118); CHEM 134L, 136L (or CHEM 116L, 117L, or CHEM 119L); CHEM 174, 175 (or CHEM 124, 125), or CHEM 220, 221; and CHEM 222L, 223L or CHEM 226L; CHEM 328; MATH 112, 116; PHYS 170, 171, or PHYS 180, 181, or PHYS 200, 201

Number of courses B.S. – 9 term courses beyond prereqs, incl senior req; B.A. – 7 term courses beyond prereqs, incl senior req

Specific courses required B.S. and B.A. – MB&B 251L, 300, 301, 302

Distribution of courses B.S. – 2 addl MB&B electives, 1 quantitative reasoning elective, and 1 science elective, all as specified; B.A. – 1 addl MB&B elective and 1 quantitative reasoning elective, as specified

Substitution permitted CHEM 333 for MB&B 302

Senior requirement Senior project (MB&B 490)
Courses

- **MB&B 050a, Topics in Cancer Biology**  
  Sandy Chang  
  Introduction to cancer as a genetic disease, with a focus on major discoveries in cancer biology that offer mechanistic insights into the disease process. A brief history of cancer; influence of the genomic revolution on cancer diagnostics; molecular defects underlying specific cancers; current and future cancer therapeutics. Patient case studies highlight specific molecular pathways and treatment strategies. Enrollment limited to freshmen with a strong background in biology and/or chemistry, typically demonstrated by a score of 5 on Advanced Placement examinations. Preregistration required; see under Freshman Seminar Program. *SC*

- **MB&B 105a or b / MCDB 105a or b, An Issues Approach to Biology**  
  Staff  
  Biological concepts taught in context of current societal issues, such as emerging diseases, genetically modified organisms, green energy, stem cell research, and human reproductive technology. Emphasis on biological literacy to enable students to evaluate scientific arguments. *SC*

- **MB&B 107b / PHYS 107b, Being Human in STEM**  
  Andrew Miranker and Lynne Regan  
  A collaboratively-designed, project-oriented course that seeks to examine, understand, and disseminate how diversity of gender, race, religion, sexuality, economic circumstances, etc. shape the STEM experience at Yale and nationally, and that seeks to formulate and implement solutions to issues that are identified. Study of relevant peer-reviewed literature and popular-press articles. Implementation of a questionnaire and interviews of STEM participants at Yale. Creation of role-play scenarios for provoking discussions and raising awareness. Design and implementation of group interventions. *SO*

- **MB&B 110, Current Issues in Biological Science**

- **MB&B 200a / MCDB 300a, Biochemistry**  
  Ronald Breaker, Nicole Clay, and Donald Engelman  
  An introduction to the biochemistry of animals, plants, and microorganisms, emphasizing the relations of chemical principles and structure to the evolution and regulation of living systems. Prerequisites: BIOL 101 or equivalent performance on the corresponding biological sciences placement examination; one term of organic chemistry; or with permission of instructor. *SC*

- **MB&B 218La / HSAR 218La, Art and Biomolecular Recognition Laboratory**  
  Andrew Miranker  
  Students create and execute original projects in materials science using biotechnological tools. Introduction to the technical examination of art, with analysis of works from Yale University Art Gallery collections; the chemical basis of artist’s materials; applied techniques in biomolecular evolution. This course will meet one day a week on West Campus in Room A222B and one day a week on main campus. Prerequisite: college-level chemistry and/or biology, or the equivalent in advanced placement. Enrollment limited; preference to students not majoring in the biological sciences. Preregistration required; interested students should e-mail the instructor prior to the first week of classes. *SC RP*

- **MB&B 230, Rain Forest Expedition and Laboratory**

- **MB&B 251La or b / MCDB 301La or b, Laboratory for Biochemistry**  
  Staff  
  An introduction to current experimental methods in molecular biology, biophysics, and biochemistry. Limited enrollment. Requires preregistration by e-mail to aruna.pawashe@yale.edu and william.konigsberg@yale.edu prior to the first week of classes. After BIOL 101. *SC ½ Course cr*

- **MB&B 300a, Principles of Biochemistry**  
  Matthew Simon and Michael Koelle  
  Discussion of the physical, structural, and functional properties of proteins, lipids, and carbohydrates, three major classes of molecules in living organisms. Energy metabolism and hormone signaling as examples of complex biological processes whose underlying mechanisms can be understood by identifying and analyzing the molecules responsible for these phenomena. After BIOL 101; after or concurrently with CHEM 175 (or CHEM 125) or 220. *SC*
MB&B 301b, Principles of Biochemistry II  
Christian Schlieker and Joan Steitz  
Building on the principles of MB&B 300 through study of the chemistry and metabolism of DNA, RNA, and proteins. Critical thinking emphasized by exploration of experimental methods and data interpretation, from classic experiments in biochemistry and molecular biology through current approaches. Prerequisite: MB&B 300 or permission of instructor. SC

MB&B 302b, Principles of Biophysics  
Enrique De La Cruz and Peter Moore  
An introduction to the theoretical basis of biophysical concepts and approaches with selected examples and applications. Prerequisites: MB&B 300 and CHEM 328. SC

MB&B 330a / MCDB 330a / NSCI 324a, Introduction to Dynamical Systems in Biology  
Thierry Emonet and Kathryn Miller-Jensen  
Study of the analytic and computational skills needed to model genetic networks and protein signaling pathways. Review of basic biochemical concepts including chemical reactions, ligand binding to receptors, cooperativity, and Michaelis-Menten enzyme kinetics. Deep exploration of biological systems including: kinetics of RNA and protein synthesis and degradation; transcription activators and repressors; lysozyme/lysine switch of lambda phage and the roles of cooperativity and feedback; network motifs such as feed-forward networks and how they shape response dynamics; cell signaling, MAP kinase networks and cell fate decisions; bacterial chemotaxis; and noise in gene expression and phenotypic variability. Students learn to model using MatLab in a series of in-class hackathons that illustrate biological examples discussed in lectures. Prerequisites: BIOL 101 and 102, and PHYS 170 and 171 or equivalents, or with permission of instructors. Q, SC

MB&B 361b / BENG 46b / MCDB 361b / NSCI 32b, Dynamical Systems in Biology  
Damon Clark, Thierry Emonet, and Jonathon Howard  
Advanced topics related to dynamical processes in biological systems. Processes by which cells compute, count, tell time, oscillate, and generate spatial patterns. Time-dependent dynamics in regulatory, signal-transduction, and neuronal networks; fluctuations, growth, and form. Comparisons between models and experimental data. Dynamical models applied to neurons, neural systems, and cellular biophysical processes. Use of MATLAB to create models. Prerequisite: MCDB 330 or equivalent, or a 200-level biology course, or with permission of instructor. Q, SC

MB&B 420a, Macromolecular Structure and Biophysical Analysis  
Andrew Miranker, Yong Xiong, Jonathon Howard, Nikhil Malvankar, and Wendy Gilbert  
Analysis of macromolecular architecture and its elucidation using modern methods of structural biology and biochemistry. Topics include architectural arrangements of proteins, RNA, and DNA; practical methods in structural analysis; and an introduction to diffusion and NMR. Prerequisites: MBB 301 and 302. SC

* MB&B 425a / MCDB 425a, Basic Concepts of Genetic Analysis  
Jun Lu  
The universal principles of genetic analysis in eukaryotes. Reading and analysis of primary papers that illustrate the best of genetic analysis in the study of various biological issues. Focus on the concepts and logic underlying modern genetic analysis. Prerequisite: MCDB 202 or equivalent. SC

MB&B 435a, Quantitative Approaches in Biophysics and Biochemistry  
Nikhil Malvankar and Yong Xiong  
An introduction to quantitative methods relevant to analysis and interpretation of biophysical and biochemical data. Topics include statistical testing, data presentation, and error analysis; introduction to mathematical modeling of biological dynamics; analysis of large datasets; and Fourier analysis in signal/image processing and macromolecular structural studies. Instruction in basic programming skills and data analysis using MATLAB; study of real data from MB&B research groups. Prerequisites: MATH 120 and MB&B 300 or equivalents, or with permission of instructors. Q, SC

MB&B 443b, Advanced Eukaryotic Molecular Biology  
Mark Hochstrasser, Matthew Simon, Patrick Sung, Seyedtaghi Takyar, and Wendy Gilbert  
Selected topics in regulation of chromatin structure and remodeling, mRNA processing, mRNA stability, translation, protein degradation, DNA replication, DNA repair, site-specific DNA recombination, and somatic hypermutation. Prerequisites: MB&B 300 and 301, or permission of instructor. SC RP

* MB&B 445b, Methods and Logic in Molecular Biology  
Wendy Gilbert, Donald Engelman, Mark Hochstrasser, and Christian Schleicker  
An examination of fundamental concepts in molecular biology through analysis of landmark papers. Development of skills in reading the primary scientific literature and in critical thinking. Prerequisites: MB&B 300 and 301. SC RP

MB&B 449a, Medical Impact of Basic Science  
Joan Steitz, Thomas Steitz, I. George Miller, Andrew Miranker, David Schatz, Karla Neugebauer, and Seyedtaghi Takyar  
Examples of recent discoveries in basic science that have elucidated the molecular origins of disease or that have suggested new therapies for disease. Readings from the primary scientific and medical literature, with emphasis on developing the ability to read this literature critically. Prerequisites: MB&B 300 and 301 or equivalents, or permission of instructor. SC

MB&B 452b / MCDB 452b, Biological Data Science, Mining and Modeling  
Mark Gerstein  
Techniques in data mining and simulation applied to bioinformatics, the computational analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. Sequence alignment, comparative genomics and phylogenetics, biological databases, geometric analysis of protein structure, molecular-dynamics simulation, biological networks, microarray normalization, and machine-learning approaches to data integration. Prerequisites: MB&B 301 and MATH 115, or permission of instructor. SC
* MB&B 459a / ENGL 459a / EVST 215a, Writing about Science, Medicine, and the Environment  Carl Zimmer
Advanced non-fiction workshop in which students write about science, medicine, and the environment for a broad public audience. Students read exemplary work, ranging from newspaper articles to book excerpts, to learn how to translate complex subjects into compelling prose. Admission by permission of the instructor only. Applicants should email the instructor at carl@carlzimmer.com with the following information: 1. One or two samples of nonacademic, nonfiction writing. (No fiction or scientific papers, please.) Indicate the course or publication, if any, for which you wrote each sample. 2. A note in which you briefly describe your background (including writing experience and courses) and explain why you’d like to take the course. WR RP

* MB&B 460Lb, Advanced Laboratory for Biochemistry  Alan Garen and Aruna Pawashe
An advanced laboratory in biochemistry, molecular biology, and biophysics. Students perform experiments on an individual basis that have unknown outcomes using techniques currently used in research labs. MB&B 251L or permission of the instructor. SC ½ Course cr

* MB&B 470a and MB&B 471b, Research in Biochemistry and Biophysics for the Major  Karla Neugebauer
Individual laboratory projects under the supervision of a faculty member. Students must submit an enrollment form that specifies the research supervisor by the date that course schedules are due. Students are expected to commit at least ten hours per week to working in a laboratory. Written assignments include a research proposal, due near the beginning of the term, and a research report that summarizes experimental results, due before the beginning of the final examination period. Students receive a letter grade. No more than two credits of MB&B 470/471 may be taken. These courses do count toward the degree requirements. Enrollment limited to MB&B majors. Prerequisite: MB&B 251L or permission of the instructor. SC

* MB&B 472a and MB&B 473b, Research in Biochemistry and Biophysics  Karla Neugebauer
Individual laboratory projects under the supervision of a faculty member. Students must submit an enrollment form that specifies the research supervisor by the date that course schedules are due. Students are expected to commit at least ten hours per week to working in a laboratory. Written assignments include a research proposal, due near the beginning of the term, and a research report that summarizes experimental results, due before the beginning of the final examination period. Students are graded pass/fail. Taken after students have completed two credits of MB&B 470 and 471. These courses do not count toward the degree requirements. Prerequisites: MB&B 470, 471 and 251L or permission of the instructor. SC

* MB&B 478a and MB&B 479b, Intensive Research in Biochemistry and Biophysics  Karla Neugebauer
Individual laboratory projects under the supervision of a faculty member. Students must submit an enrollment form that specifies the research supervisor by the day that course schedules are due. Students are expected to commit at least twenty hours per week to working in a laboratory. Written assignments include a research proposal, due near the beginning of the term, and a research report that summarizes experimental results, due before the beginning of the final examination period. No more than two course credits count as electives toward the B.S. degree. Enrollment limited to senior MB&B majors. Prerequisite: MB&B 251L or 360L. 2 Course cr per term

* MB&B 490b, The Senior Project  Mark Solomon, Dieter Söll, Thomas Steitz, and Matthew Simon
Colloquium for fulfillment of the senior requirement. The course involves a written and an oral presentation of a senior paper in an area of biochemistry or biophysics. The topic is selected in consultation with the faculty members in charge of the course.
